

Making the Optimal Choice

Service for SKC Sampling Equipment

Congratulations on choosing to follow the best practice of annual calibration and service of your industrial hygiene equipment. Caring for your SKC sampling pumps, flowmeters, and noise instruments is essential. Accurate equipment means accurate, defensible data to protect the health and safety of workers, and comply with OSHA requirements. The next step is choosing who performs these important services. While third-party service labs do exist, there are compelling benefits to choosing SKC, the manufacturer of your equipment, over an outside service provider. Let us take a quick look.

We do it best! SKC designed, engineered, built, calibrated, and rigorously tested the equipment you purchased

Our experienced technicians are experts on the equipment and have access to all the data and tools necessary to bring your SKC equipment into compliance and calibration using traceable standards.

SKC service is seamless, with fast turnaround. Unlike third-party service providers, SKC technicians have original factory parts on-hand without delay and access to the latest tools, firmware, and software updates. Your SKC equipment is returned to you as quickly as possible — checked, adjusted, and restored for optimal performance.

Savings in time, money, and trust. With original parts, tools, and expertise, SKC Service provides full service done right, with no additional markup on replacement parts. You know us. We are the manufacturer you trusted at purchase, and we are the people you can trust for reliable service during the lifetime of your SKC equipment.

Maintaining manufacturer warranty. If your equipment is still under warranty, we can perform the necessary service without voiding any remaining warranty. If your equipment is out of warranty, choosing SKC Service puts it in the best hands.

Keeping service turnaround fast and affordable. SKC strives to keep its services at a good value.

Need instrument calibration? SKC CAL Labs offer NIST-traceable and multi-point calibration and certification services for gas flow instruments and SKC acoustic calibrators. Our gas flow lab is ISO/IEC 17025:2017 accredited and provides NIST-traceable and ISO service levels.

The value of SKC Service to you: Choosing SKC Service provides you with our expertise, replacement/repair with original factory parts, updates to the latest firmware/software, maintenance of warranty, rigorous performance checks, traceable calibration, savings in time and money, and service you can trust from start to finish to get your equipment in optimal condition and back in the field.

SKC – Our Science in the Service of People

Industrial hygienists and other OEHS professionals have trusted SKC solutions and expertise for over 60 years. SKC Service is another way we partner you in your mission to protect the health and safety of workers.
